

Film Capacitors

Series/Type: Metallized Polyester Film Capacitors (MPET-AC-DIP)
Series code: 141

141 Metallized polyester film Capacitor

MPP-AC • DIP Type

Part Number Description

Rated Capacitance

Three-digit (334) indicate rated capacitance in Pico Farad (First two digits indicate value & third digit indicates number of zeroes to be suffixed to first two digits).

For example:

103	= 10 ×	10 ³	= 10000 pF	= 10 nF	=0.01 μF
104	= 10 ×	10 ⁴	= 100000 pF	= 100 nF	=0.1 μF
105	= 10 ×	10 ⁵	= 1000000 pF	= 1000 nF	=1 μF
106	= 10 ×	10 ⁶	= 10000000 pF	= 10000 nF	=10 μF

Capacitance Tolerance

In 3rd group of the part number-

F = ±1%, G = ±2%, H = ±2.5%, I = ±3.5%, J = ±5%, K = ±10%, L = ±15%, M = ±20%, N=±40%

Rated Voltage

One digit and one letter (2J) or two digits indicate rated voltage

Rated Voltage Codification

For DC Rated Voltage													
A		B		C		D		E		F		G	
1A	10	1B	12.5	1C	16	1D	20	1E	25	1F	30	1G	40
2A	100	2B	125	2C	160	2D	200	2E	250	2F	300	2G	400
3A	1000	3B	1250	3C	1600	3D	2000	3E	2500	3F	3000	3G	4000
H		I		J		K		L		M		N

VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC	VAC

***Packing Type details:**

- 1: Bulk packing (original pitch)
- 2: Bulk packing (after forming & cutting)
- 3: Ammo packing (after forming & taping)
- 4: Bulk packing (after forming in original pitch without cut)
- 5: Bulk packing (after formed & without cut)
- 6: Ammo packing (Straight lead)
- 7: Bulk packing (Straight lead cut)
- 8: Reel packing (Straight lead)

Reference Data

Capacitance	0.1μF to 0.33μF
Capacitance tolerance	±3.5% to ±20%
Rated AC voltage at 50/60 Hz	310Vac
Climatic testing class according to IEC 60068-1	40/110/56
Maximum application temperature	100°C
Rated temperature	85°C
Reference standards	IEC 60384-2
Dielectric	Polyester
Electrodes	Metallized
Construction	series
Encapsulation	Coated with flame retardant epoxy powder)
Leads	Tinned wire
Marking Example	MPET-AC/D214K310V/LOT NO*****
Compatibility to RoHS	

Dimensions Description

Rated Voltage	Rated	Dimensions (mm)						Part Number
	Capacitance	L	H	W	S	d	l	
	(μF)	(MAX)	(MAX)	(MAX)	(± 0.75)	(± 0.05)	(Min)	
250VAC	0.1	6.0	14.5	17.5	16.0	0.7	17.0	141 104 K 02 1 E
	0.1	6.0	14.5	17.5	16.0	0.7	4.0 \pm 0.5	141 104 K 02 7 E
	0.22	6.0	11.5	11.5	9.0	0.6	17.0	141 224 K 02 1 E
	0.22	6.0	10.5	11.5	9.0	0.6	17.0	141 224 K 02 1 O
	0.33	7.5	12.5	11.5	9.0	0.6	17.0	141 334 K 02 1 O

Specific Data

Description	Value		
Maximum tangent of loss angle(Tan δ)	Frequency 10 kHz	$C_R \leq 1\mu\text{F}$ 0.0015	$C_R > 1\mu\text{F}$ -
Voltage proof test between leads	1250 Vdc for 2 sec		
Insulation Resistance (RIS) (or) time constant $T = C_R \times \text{RIS}$ at 25° C, relative humidity $\leq 70\%$	$C_R \leq 0.33 \mu\text{F}$ $\geq 300000 \text{ M}\Omega$	$C_R > 0.33 \mu\text{F}$ $\geq 10000\text{s}$	

only better

Endurance Test

Loaded at 1.25 times of rated voltage at 85°C for 1000 hours.

After The Test

- $\Delta C/C$: $\leq 10\%$ of initial value.
- Increase of $\tan \delta$: ≤ 0.005 at 1 kHz
- Insulation resistance : $\geq 50\%$ of the value mentioned in specific data.

Humidity Test

Loaded at 240 Vac at 85°C and 85%Rh for 500 hours.

After The Test

- $\Delta C/C$: $\leq 10\%$ of initial value.
- Increase of $\tan \delta$: ≤ 0.005 at 1 kHz
- Insulation resistance : $\geq 50\%$ of the value mentioned in specific data.

Temperature Derating Graph

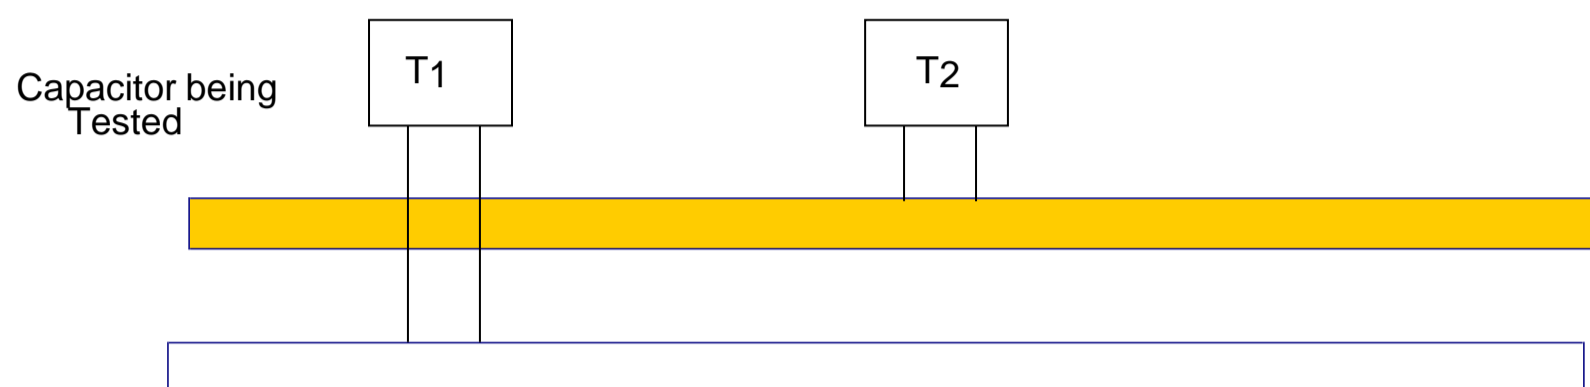

For temperature between +85°C and 105°C a decreasing factor of 1.25% per °C on the rated voltage VR has to be applied

Power Dissipation and Maximum Component Temperature Rise

After applying the A.C voltage to the capacitor with certain frequency, we can measure the hot spot temperature of the capacitor. From that we can calculate ΔT .

$$\Delta T = \text{hot spot temperature} - \text{ambient temperature}$$

T1 is the capacitor under test (Connected in the circuit)

T2 is capacitor which has no connection

Distance between T1 and T2 should be about 50mm and 100mm from other components. To avoid radiation or convection, the capacitor should be tested in a wind-free box. The capacitor under test is separated by polystyrene

$$\Delta T_{\max} = T1 - T2$$

at one frequency level the ΔT_{\max} reach 10°C. That is the frequency which we have to start frequency derating.

Storage Conditions

Avoid storing the capacitors in places where the environmental conditions differ from the following:

Storage time: ≤ 24 months from the date marked on the label glued to the package.

- Temperature: -40 to 80°C
- Humidity:

- Average per year: $\leq 70\%$
- For 30 full days randomly distributed throughout the year: $\leq 85\%$
- Dew: absent

After a longer period of storage or use, the tolerance can increase; but, according to standard specification, it may never exceed twice the value measured at the time of delivery.

Disclaimer

All our capacitors are designed, manufactured and tested to specifications. We strictly adhere to standards in procurement of materials, in the laid down manufacturing processes and consistently apply stringent process controls and testing parameters. This ensures that our capacitors always perform to the offered specifications. Appropriateness of use in a specific circuit and fitness to a particular application however needs to be verified and its reliability through expected lifetime is required to be validated by the customer. Deki's responsibility is limited to ensuring that the capacitor performs as claimed in the specification/ data sheets provided by Deki. Deki specifically disclaims any implied warranties of fitness for any particular purpose. Liability, in any case is limited to the price paid for the capacitors.
